Tizbo LLC — Robocall Mitigation Program

Tizbo LLC submits this Robocall Mitigation Program to the Federal Communications Commission under 47 C.F.R. §§ 64.6300–64.6305. It describes how Tizbo LLC prevents illegal robocalls from passing through its network.

Part I — Filer Profile

Item	Details
Legal entity name	Tizbo LLC
State of organization	Delaware, United States
Principal business address	8 The Green, Suite B, Dover, Delaware 19901, United States
Website	https://tizbo.com/
Compliance contact email	info@tizbo.com
Responsible officer	Alfiya Shaikh, President
FCC Registration Number (FRN)	0039208335
EIN Number	32-0877277
Effective date of this program	15 November 2026

Part II — Role in the Call Path

Under 47 C.F.R. § 64.6300, Tizbo LLC is a U.S. intermediate (wholesale) voice service provider. Tizbo LLC sits between the networks that hand calls to it and the networks that deliver them. It is not the originating provider for its customers' calls.

Where traffic comes from. Tizbo LLC accepts calls only from three groups: U.S. carriers with whom it holds an authorized interconnection, international wholesale carriers it has approved, and enterprise customers it has verified. It then routes those calls on to downstream carriers or to the terminating network.

What Tizbo LLC does not do. Tizbo LLC does not run or originate robocall campaigns. It does not originate autodialed traffic. It does not assign telephone numbers to end-user subscribers. It does not knowingly carry illegal robocalls.

Part III — Regulatory History

In the two (2) years before this filing, Tizbo LLC has had no FCC enforcement action, no robocall investigation, no finding of caller ID spoofing, and no regulatory citation concerning robocall mitigation.

If any such action arises, Tizbo LLC will update its Robocall Mitigation Database filing within ten (10) business days, as 47 C.F.R. § 64.6305 requires.

Part IV — Mitigation Controls

Tizbo LLC applies six controls to every call that crosses its network toward a U.S. destination.

Control	How Tizbo LLC applies it
Continuous traffic surveillance	Signaling and call patterns on U.S.-bound traffic are watched at all times. Automated alerts flag unusual call patterns, sudden traffic bursts, invalid or spoofed caller IDs, and other robocall indicators, and each alert opens an investigation. While it is investigated, the traffic may be blocked, throttled, or suspended.
Counterparty admission (Know Your Customer / Know Your Upstream)	Before any carrier or enterprise is connected, Tizbo LLC confirms its legal existence, checks its regulatory and business standing, reviews the services it offers, and screens it for robocall risk. A party that fails these checks is refused, and an existing party that fails them is disconnected.

Control	How Tizbo LLC applies it
Lawful-operator requirement	Traffic is exchanged only with carriers and enterprises running lawful telecommunications operations. Sources known to carry high-risk robocall traffic are not accepted.
Caller ID integrity	Upstream carriers may send only caller IDs they are authorized to use. Tizbo LLC checks signaling for numbers that are spoofed, invalid, or not authorized.
Do-Not-Originate and invalid-number blocking	Calls are blocked when they display a number on the FCC Do-Not-Originate list, or a number that is invalid, unallocated, spoofed, or belongs to a government or emergency range.
Contractual duties on upstream providers	Every upstream provider must keep its own robocall mitigation program, forbid illegal robocalls and spoofing, follow FCC rules, and cooperate with traceback. Tizbo LLC reviews upstream traffic periodically and suspends or blocks any source that does not comply.

Part V — Traceback Response

Tizbo LLC answers traceback requests from U.S. carriers, from the USTelecom Industry Traceback Group (ITG), and from regulators. For each request, Tizbo LLC will:

1. Respond within 24 hours wherever possible.
2. Supply the call detail records and routing information for the call.
3. Name the upstream provider that handed the call to Tizbo LLC.
4. Suspend or disconnect any party found to be sending illegal traffic.

Tizbo LLC keeps call detail records and partner verification records for at least two (2) years.

Part VI — Caller ID Authentication (STIR/SHAKEN)

Tizbo LLC does not originate calls, so it does not assign STIR/SHAKEN attestation levels.

When a call arrives already signed, Tizbo LLC relies on the attestation given by the originating provider and verifies the identity header it receives. When a call arrives unsigned, Tizbo LLC treats it with heightened scrutiny: closer traffic monitoring, caller ID validation, Do-Not-Originate blocking, and enforcement through traceback. These steps match the FCC's robocall mitigation duties for intermediate providers.

Part VII — Program Governance

Tizbo LLC treats this program as a living process and strengthens it over time. It studies traffic trends, refreshes its robocall indicators, audits its partners, works with industry groups, and tracks regulatory changes.

Under 47 C.F.R. § 64.6305, Tizbo LLC will:

- keep its Robocall Mitigation Database filing accurate and current;
- revise this program within ten (10) business days of any material change;
- recertify its Robocall Mitigation Database filing every year by March 1.

Part VIII — Officer Declaration

I, Alfiya Shaikh, President of Tizbo LLC, declare under penalty of perjury that the information in this Robocall Mitigation Program, and in Tizbo LLC's filing in the FCC Robocall Mitigation Database, is true, accurate and complete to the best of my knowledge.

Tizbo LLC has put in place reasonable and effective measures to mitigate illegal robocall traffic, consistent with 47 C.F.R. §§ 64.6300–64.6305, and meets its obligations as an intermediate voice service provider.
